The nutrient analysis of liquid fertilisers is quoted as weight of nutrient per volume of liquid (w/v), as above.

For dry fertilisers, nutrient analysis is quoted on the weight of nutrient per weight of product (w/w). For example if a product is 46% nitrogen, it means there is 46 kilograms of nitrogen per 100 kilograms of product.

But the weights and volumes of fertilisers differ. For example, 1,000 litres of EASY N weighs 1,320 kilograms.

As EASY Liquids® are sold in bulk by the tonne, it is often necessary to compare a tonne of dry product with a tonne of liquid fertiliser.

The calculation to convert w/v to w/w is: Analysis in w/v divided by specific gravity equals analysis in w/w.

The following table (over page) shows the w/w analysis of the EASY Liquids range.
